Continuing the CSS for the child theme

Despite the child theme supplies a lot of the basic CSS for the website, I am just scratching the surface with what can be done.

Open the "`layout.css`" file inside the "css" folder in the theme folder. We will continue the css styles:

```css
.site-header {
    padding: 2.5em 2.5em 1.5em 2.5em;
}
.site-branding {
    margin-top: 0;
    margin-bottom: 0;
}
#content {
    padding-top: 20px;
}
```
